detection_utils.core.preprocessor
_test.PreprocessorTest.expectedBoxes
AfterRot90

```
graph LR; A[detection_utils.core.preprocessor_test.PreprocessorTest.testRandomRotation90] --> C[detection_utils.core.preprocessor_test.PreprocessorTest.expectedBoxes AfterRot90]; B[detection_utils.core.preprocessor_test.PreprocessorTest.testRot90Boxes] --> C;
```

The diagram illustrates a relationship between two test methods and a shared expected output. On the left, two white rectangular boxes with black borders contain the names of test methods: 'detection_utils.core.preprocessor_test.PreprocessorTest.testRandomRotation90' (top) and 'detection_utils.core.preprocessor_test.PreprocessorTest.testRot90Boxes' (bottom). On the right, a gray rectangular box with a black border contains the text 'detection_utils.core.preprocessor_test.PreprocessorTest.expectedBoxes AfterRot90'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both test methods are associated with or verify the same expected output.
