

tf.test.TestCase

```
classDiagram
    class tf_test_TestCase["tf.test.TestCase"]
    class detection_utils_utils_dataset_util_test_DatasetUtilTest["detection_utils.utils.dataset_util_test.DatasetUtilTest"]
    detection_utils_utils_dataset_util_test_DatasetUtilTest --|> tf_test_TestCase
```

The diagram illustrates a class inheritance relationship. At the top is the 'tf.test.TestCase' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name, while the other two are empty. Below it is the 'detection_utils.utils.dataset_util_test.DatasetUtilTest' class, represented by a shaded rectangle with three horizontal compartments. The top compartment contains the full class name, the middle compartment is empty, and the bottom compartment contains the method signature '+ test_read_examples_list()'. A blue arrow with an open triangular head points from the top of the 'DatasetUtilTest' class to the bottom of the 'tf.test.TestCase' class, indicating that 'DatasetUtilTest' inherits from 'tf.test.TestCase'.
