

tf.test.TestCase

```
classDiagram
    class TestCase["tf.test.TestCase"]
    class OpsTestPadToMultiple["detection_utils.utils.ops_test.OpsTestPadToMultiple"]
    OpsTestPadToMultiple --|> TestCase
```

The diagram illustrates a class hierarchy. At the top is the 'tf.test.TestCase' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name, while the two bottom sections are empty. Below this class is the 'detection_utils.utils.ops_test.OpsTestPadToMultiple' class, represented by a shaded rectangle divided into three horizontal sections. The top section contains the class name, the middle section is empty, and the bottom section lists four methods: '+ test_zero_padding()', '+ test_no_padding()', '+ test_non_square_padding()', and '+ test_padding()'. A blue arrow points from the top of the 'detection_utils.utils.ops_test.OpsTestPadToMultiple' class to the bottom of the 'tf.test.TestCase' class, indicating that 'detection_utils.utils.ops_test.OpsTestPadToMultiple' inherits from 'tf.test.TestCase'.
