

tf.test.TestCase

```
classDiagram
    class TestCase["tf.test.TestCase"]
    class ContextManagerTest["detection_utils.utils.context_manager_test.ContextManagerTest"]
    ContextManagerTest --|> TestCase
```

The diagram shows a class hierarchy. At the top is a class box for 'tf.test.TestCase' with two empty compartments. Below it is a class box for 'detection_utils.utils.context_manager_test.ContextManagerTest' with three compartments. The top compartment contains the class name. The bottom compartment contains a public method '+ test_identity_context_manager()'. A blue arrow with an open triangle head points from the ContextManagerTest box up to the TestCase box, indicating inheritance.

detection_utils.utils.context
_manager_test.ContextManagerTest

+ test_identity_context
_manager()
