

tf.test.TestCase

```
classDiagram
    class TestCase["tf.test.TestCase"]
    class MeshgridTest["detection_utils.utils.ops_test.MeshgridTest"]
    TestCase <|-- MeshgridTest
```

The diagram illustrates a class hierarchy. At the top is the 'tf.test.TestCase' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name, while the two lower compartments are empty. Below this class is the 'detection_utils.utils.ops_test.MeshgridTest' class, represented by a shaded rectangle with three horizontal compartments. The top compartment contains the class name. The middle compartment is empty. The bottom compartment contains two method definitions, each preceded by a plus sign: '+ test_meshgrid_numpy_comparison()' and '+ test_meshgrid_multidimensional()'. A blue arrow with an open triangular head points from the top of the 'MeshgridTest' class to the bottom of the 'TestCase' class, indicating that 'MeshgridTest' inherits from 'TestCase'.

detection_utils.utils.ops
_test.MeshgridTest

+ test_meshgrid_numpy
_comparison()

+ test_meshgrid_multidimensional()
