

tf.test.TestCase

```
classDiagram
    class TestCase["tf.test.TestCase"]
    class ExtractSubmodelUtilTest["detection_utils.utils.model_util_test.ExtractSubmodelUtilTest"]
    TestCase <|-- ExtractSubmodelUtilTest
```

The diagram shows a class hierarchy. At the top is a white box representing the superclass 'tf.test.TestCase'. It has two empty rectangular compartments below the name. Below this is a blue arrow pointing upwards, indicating inheritance. At the bottom is a grey box representing the subclass 'detection_utils.utils.model_util_test.ExtractSubmodelUtilTest'. This box has three compartments: the top one contains the class name, the middle one is empty, and the bottom one contains a public method '+ test_simple_model()'.

detection_utils.utils.model
_util_test.ExtractSubmodelUtilTest

+ test_simple_model()
