

tf.test.TestCase

```
classDiagram
    class TestCase["tf.test.TestCase"]
    class BoxCoderTest["detection_utils.core.box_coder_test.BoxCoderTest"]
    BoxCoderTest --|> TestCase
```

The diagram consists of two class boxes. The top box, representing the superclass, is divided into three horizontal sections: the top section contains the text 'tf.test.TestCase', and the two bottom sections are empty. The bottom box, representing the subclass, is divided into three horizontal sections: the top section contains the text 'detection_utils.core.box_coder_test.BoxCoderTest', the middle section is empty, and the bottom section contains the text '+ test_batch_decode()'. A blue arrow with an open triangular head points from the top of the bottom box to the bottom of the top box, indicating an inheritance relationship.

detection_utils.core.box
_coder_test.BoxCoderTest

+ test_batch_decode()
